

ODI Pharma (ODI)

Ready to Capitalize on Rapid Market Growth in Poland

ODI Pharma AB:s ("ODI Pharma" or the "Company") latest quarter was affected by import restrictions in Poland, which has been resolved after the quarters end, as the Polish government nearly doubled the import quota for medical cannabis for 2025, driven by rapidly growing demand. As ODI Pharma is the exclusive supply partner to one of the leading pharmaceutical brands in Poland, the Company is expected to capitalize on this rapidly increasing demand. With estimated net sales of SEK 96m by 2025/2026, and with an applied P/S multiple of 2.5x, a potential present value per share of SEK 12.3 (17.4) is derived in a Base scenario.

Net Sales was Affected by Import Restrictions

ODI Pharma's net sales amounted to SEK 0.1m (0.5) during Q1-24/25. Sales were affected by import restrictions set by the Polish government, where the import quota for medical cannabis in the country for 2024 were initially set at 6 tons, which was reached with several months left of the year, leading to that the Polish government increased the estimated annual demand for cannabis, hence also the quota, by an additional 5.3 tons in October 2024. As the updated quota is expected to be applied from January 2025, ODI Pharma's sales in Q1-24/25 as well as the upcoming Q2-24/25, is expected to be affected by the import restrictions. However, based on the rapid market growth, illustrated by the updated quota, and the fact that ODI Pharma acts as the supplier to one of the leading pharmaceutical brands in the country, we estimate strong revenue growth in the upcoming year.

Rights Issue of SEK 4.1m to Leverage Market Potential

On October 30th, ODI Pharma announced that the Company intends to carry out a rights issue of SEK 4.1m before transaction costs. The net proceeds are expected to be used to strengthen the financial position through loan repayments, support continued expansion into new European markets, and further establish a strong presence in Poland. Based on a pre money valuation of SEK 49m, and the estimated sales growth ahead, based on a strong market growth in Poland and expansion to more countries, Analyst Group believes that the rights issue entails a great risk/reward for investors.

Updated Valuation Range

Based on the Q1-24/25 report, where sales were affected by import restrictions, nevertheless below our expectations, we have updated our financial forecasts for ODI Pharma. Although import quotas have now been increased, the lower sales in the first quarter of the fiscal year, which is also expected for the upcoming quarter, still impact our full-year forecast. This also serves as a reminder of ODI Pharma's dependence on government regulations, which, combined with the updated forecasts and the estimated additional outstanding shares following the rights issue, results in a revised valuation range.

ABOUT THE COMPANY

ODI Pharma is a supplier of a wide range of medical cannabis products, based on dried flowers and consisting of different levels of THC and CBD. The Company sources the products from one of the largest suppliers in the world, Canadian Tilray. The products are then sold to ODI Pharma's distributor Synoptis, part of the market leading pharmaceutical company in Poland, NEUCA, initially to the Polish market, who market and distribute products to pharmacies. The products are utilized for the treatment of conditions such as multiple sclerosis, chronic pain, and chemotherapy. ODI Pharma has been listed on the Spotlight Stock Market since 2020.

E-mail	axel.ljunghammer@analystgroup.se

Value Drivers

Analyst Group sees the exclusive agreement with Synoptis as a strong value driver going forward. The agreement is expected to enable ODI Pharma's products to be sold under a strong pharmaceutical brand through Synoptis, as Analyst Group expects them to sell the products under their own well-known brand in the future. The agreement allow the Company to grow with a low cost base, paving the way for increased profitability and a higher valuation of the share.

Historical Profitability

ODI Pharma has a history of negative cash flow as the Company has gone through a long process to get products approved for sale in Poland. The Q3-23/24-report marked a significant milestone for ODI Pharma with an EBIT margin of 11% and we expect ODI Pharma to continue to grow sales and be profitable in the coming years. The rating is based on historical results and is not forward-looking.

Management & Board

The founders and board members of the Company have an extensive background in the trading industry, and the medical cannabis industry as well. Chairman of the board, Volker Wiederrich are a significant shareholder, with 39.8% of the shares, which provides incentives to create shareholder value. From January 1st 2025, Jan-Mark Edewaard has been appointed as CEO, he has over 25 years of experience from various roles, primarily within finance.

Risk Profile

The cash position at the end of September 2024 amounted to SEK 5m, which can be strengthened through a rights issue of SEK 4.1m in December 2024. With the near doubling of the medical cannabis import quota in Poland from January 2025, we see strong opportunities for ODI Pharma to strengthen sales moving forward and achieve profitability, which lowers the financial risk. However, the medical cannabis market is highly regulated.

Increased Import Quota is Expected to Accelerate Sales in the Coming Year

ODI Pharma's Q1-report in the Company's broken fiscal year showed net sales of SEK 0.1m (0.5), which marked a notch in the growth curve. ODI Pharma's most important growth driver is sales on the polish market through the market leading pharmaceutical brand Synoptis Pharma, part of the NEUCA Group. The polish market is reliant on imports to supply the rapidly expanding medical cannabis market, as cultivation is not allowed in the country. The import has historically been limited by a quota set by the polish government which determines how much can be imported each year. Going into 2024, the estimate of annual demand for cannabis for Poland, hence also the import quota, amounted to 6 tons, which can be compared to 4.6 tons sold during 2023. However, due to rapid growth in demand throughout the year, the quota was reached with several months left of the year, leading to that the polish government increased the estimated annual demand for cannabis, hence also the quota, by 5.3 tons or 88% in October 2024. This means that the updated quota amounts to approx. 11.3 tons, which is expected to be applied from January 2025.

Net sales
negatively
affected by sales
quota

ODI Pharma's net sales in Q1-24/25 is expected to have been affected by prior import restrictions, which is also expected to continue during the current second quarter in the Company's fiscal year. Nevertheless, the increased quota is a clear sign of the rapid growth in the polish medical cannabis market, with the current quota amounting to a 142% growth compared to the amount sold in 2023. We expect ODI Pharma to capitalize on this as a supplying partner to one of the leading pharmaceutical brands in the country, resulting in accelerated growth in the coming year.

Solid Cost Control

ODI Pharma continues to operate with a slim organization, with a low cost base as a result. The total operating expenses amounted to SEK 1.6m (1.3), corresponding to a growth of 24% Y-Y but a decrease of 40% Q-Q. Analyst Group believes that ODI Pharma continues to develop with a stable low-cost base, and we anticipate that this low-cost structure will be maintained even during scaling, given the Company's scalable business model.

40%
Cost decrease
Q-Q

Rights Issue of SEK 4.1m for Continued Expansion in the Polish Market

The cash flow from operations before changes in working capital amounted to SEK -1.5m, due to a positive effect from changes in working capital amounting to SEK 3.5m the operating cash flow amounted to SEK 2.1m. The cash position at the end of the quarter amounted to SEK 5m, an increase of approx. SEK 2.3m Q-Q. After the end of September, ODI Pharma announced that the Company has resolved to carry out a rights issue of approximately SEK 4.1m before transaction costs, with an option for an over-allotment of an additional SEK 2.0m. The transaction-related costs are estimated to amount to a maximum of approximately SEK 0.9m, which would amount to 22% of the gross proceeds in the event of full subscription, which is deemed high.

The Q1-24/25 report showed that ODI Pharma are yet to reach a sustainable positive cash flow, which is expected to be the reason for the communicated rights issue. The import restrictions have hampered the Company's growth in the previous quarter, increasing the need for liquidity in the short term. Nevertheless, with the increased import licenses from January 2025 we asses that the expected revenue growth on the polish market and the scalable business model will be improving profitability, thereby projecting that ODI Pharma will be cash flow positive in 2025. Hence, the cash position at the end of September in combination with the proceeds from the rights issue is expected to be enough to finance the operations until sustainable positive cash flow has been reached.

Strategic Key Recruitments to Leverage on the Market Potential

Finally, several key recruitments within management and the board have taken place in recent months. Malcolm Allan has been appointed to the board, bringing extensive experience from the global cannabis market, including his current role as Vice President at Tilray Brands Inc, which also shows ODI Pharma's supplier Tilray's commitment to ODI Pharma's business model. Furthermore, Jan-Mark Edewaard has been appointed as the new CEO, starting in January. Jan-Mark brings over 25 years of financial and operational experience, having led complex projects across various industries. Analyst Group believes that both appointments possess relevant experience to contribute to the Company's upcoming growth initiatives in the European medical cannabis market.

Rapid market growth in Poland

Synoptis Pharma is a daughter company to the market leading pharmaceutical company NEUCA, with the mission to provide pharmacists, medical doctors and patients with products that bring value for health. In 2023, Synoptis reached SEK ~900m in revenues, corresponding to a growth rate of 20% with an EBITDA result of SEK 240m. Synoptis Pharma has a well-developed network among pharmacies in Poland, reaching 83% of the country's pharmacies.

Dependent of the agreement with Synoptis

The Polish Market is Accelerating After Several Years of Lack of Supply

The Polish medical cannabis market has grown rapidly in recent years, albeit from low levels. The market supply has struggled to meet the existing demand as a result of few products being approved for use, leading to periods without any supply at all on the market. However, more products have been approved for sales in the last years, which resulted in a breakthrough year in 2023, where approximately 4,600 kg of medical cannabis was sold in the country, compared to approximately 1,200 kg in 2022. The rapid market growth has continued in 2024, as the Polish government estimated demand for the year, amounting to 6,000 kg, was reached with several months left of 2024, resulting in that the Polish government increased the estimated annual demand for cannabis, hence also the import quota, by 5.3 tons or 88% in October 2024. The updated quota amounts to approx. 11.3 tons for 2025, corresponding to a growth of 142% growth compared to the amount sold in 2023. We expect ODI Pharma to capitalize on this, since the Company are the supplying partner to one of the leading pharmaceutical brands in the country, resulting in accelerated growth in the coming year.

The Exclusive Collaboration Agreement with Synoptis is a Potential Game Changer

In August 2023, ODI Pharma entered an exclusive collaboration agreement with Synoptis Pharma, part of the NEUCA group, which states that ODI Pharma will be the exclusive supply partner for medical cannabis products to Synoptis in 23 countries in Eastern Europe for a period of 5 plus additional optional 3.5 years. The NEUCA group is a market leader in the wholesale distribution of pharmaceutical products in Poland and has approx. a 30% market share in all pharmaceutical sales in Poland and a strong presence in all of Eastern Europe with reported net sales of approx. SEK 32bn in 2023. Initially, we expect sales of the products on the Polish market and given that Synoptis has a strong brand awareness in the country, as well as in all of Eastern Europe, Analyst Group expects Synoptis to establish the products under their own brand in the future. We expect doctors and patients in Poland to prioritize a well-known local brand ahead of other international brands, especially as the pricing for the products are expected to be similar, which is beneficial and is estimated to drive the revenue growth for ODI Pharma. Following an expected favorable reception in the Polish market, Synoptis is anticipated to expand to more countries in Eastern Europe, something that is estimated to drive further growth for ODI Pharma.

Highly Scalable Business Model with Low Operational Costs

As ODI Pharma acts as an intermediary between the leading cultivator Tilray, with whom ODI Pharma has a partnership, and the distributor Synoptis, while also outsourcing costs such as product shipping, the organization can be kept lean, which constitutes that operational costs are expected to be kept low, even with rapid scaling, which creates a scalable business model. Analyst Group sees the results of Q3-23/24 as proof of the scalable business model as sales grew to SEK 13.9m while the cost base was held stable, why the EBIT margin amounted to 11%. Moreover, the business model is asset light with limited or no investments needed, which is expected to lead to a good cash conversion ratio.

Forecast and Valuation: a Summary

ODI Pharma delivered net sales of SEK 21.4m in H2-23/24 and given Synoptis strong pharmaceutical brand and the fact that Synoptis have communicated that the medical cannabis products will be an important factor for the future growth, we expect strong sales growth for ODI Pharma going forward. Analyst Group estimate net sales to grow from SEK 22.4m in 2023/2024, to SEK 145m in 2026/2027. With a scalable business model, we expect the EBIT margin to improve from 1% in 2024/2025 to 14% in 2026/2027. Based on an applied P/S multiple of 2.5x on 2025/2026 estimated sales of SEK 95.7m and a discount rate of 13.1%, a present value per share of SEK 12.3 is derived in a Base scenario.

The Medical Cannabis Market is Highly Regulated

The growth on the medical cannabis market in Poland has been held back by difficulties for products to meet regulations and get approved by the medicinal agency. The highly regulated and sluggish market is something ODI Pharma needs to monitor and obtain for new markets as well as maintain the appropriate import licenses. The Company bears the ultimate responsibility to Synoptis to ensure that the products comply with the regulations existing in the markets. Furthermore, ODI Pharma are dependent of the agreement with Synoptis, which poses a risk in the event that the agreement is terminated for any reason. However, ODI Pharma can expand to new markets, where the Company made a first strategic delivery to the Swiss market in June 2024, which is expected to be a long-term strategic objective for the Company.

Company Description

ODI Pharma was founded in 2018 with the aim of being a leading producer of pharmaceutical cannabis in the European market. In 2020, the Company went public and raised SEK 25m in order to initiate the Polish strategy, meaning deliver products to and capitalizing on the growing Polish medical cannabis market. ODI Pharma had signed agreements with one of the largest Canadian suppliers, Aphria Inc, who were later acquired by another large Canadian cannabis supplier, Tilray, as well as a distribution agreement with NEUCA S.A., a leading pharmaceutical company in Poland. The strategy was to source products from Aphria and sell to Polish patients through pharmaceutical distributors like NEUCA, with the products being labeled ODI Pharma. However, obtaining market authorization to sell products in the Polish market took longer than expected, among other things due to the covid-19 pandemic, and ODI Pharma received approval from authorities to sell and distribute the Company's products in Poland in January 2023.

The Exclusive Collaboration Agreement with Synoptis Pharma

Before sales of the ODI Pharma-labeled products started the Company entered an exclusive collaboration agreement with Synoptis Pharma, part of the NEUCA group, in August 2023. The agreement stipulates that ODI Pharma is the exclusive supply partner for medical cannabis products to Synoptis for a period of 5 plus additional optional 3.5 years covering 23 Eastern and Southeastern European markets, including for instance Poland, Czech Republic, Ukraine, Croatia. Initially sales will begin in Poland, where NEUCA is a market leading pharmaceutical company. Moreover, this agreement means that Synoptis will exclusively source medical cannabis from ODI Pharma to facilitate the distribution of medical cannabis. Through this agreement, Synoptis will market and distribute the products while ODI Pharma's role will be to source the products from the Company's supplier Tilray.

Revenue Model

ODI Pharma's revenue in a given year is based on the number of gram's medical cannabis sold and the price per gram. ODI Pharma's revenue model is to sell raw material, i.e. the raw material of fully approved cannabis for medical purposes, to Synoptis Pharma, part of the NEUCA group, which is sourced from ODI Pharma's supplier Tilray. Synoptis then market and distribute the products in the different markets. Thus, ODI Pharma's revenue model is simple and paves the way for a low cost base. The products are high quality and with a competitive price in order to gain market share primarily on the Polish market. When a patient suffers from a condition that medical cannabis can mitigate, a doctor decides whether to prescribe medical cannabis, which is later retrieved at the pharmacy by the patient. Hence, the Company's revenue is dependent on doctors' prescriptions, as well as if the patient wish to be treated with medical cannabis. Currently, there are no insurance coverage for medical cannabis in the Polish market, which means that the patients pay for the products themselves. Based on a market price of EUR 13-16 per gram and an assumption of consumption of one gram per day, this cost amounts to approximately EUR 400 per patient and month. However, there are ongoing discussions about introducing insurance coverage, which means it could happen in the future.

NEUCA

The NEUCA group is a market leader in the wholesale distribution of pharmaceutical products in Poland and has approx. a 30% market share in all pharmaceutical sales in Poland. Moreover, NEUCA is recognized by 60% of independent pharmacies, which there are over 9,400 of in Poland, as being the most important supplier of pharmaceuticals, which further reinforces the image of NEUCA as a market-leading brand in the country. Furthermore, NEUCA has a strong presence in all of Eastern Europe with reported net sales of approx. SEK 32bn in 2023.

Illustration of ODI Pharma's Supply Chain all the way from Supplier to Patient.

The Products

ODI Pharma currently supplies a wide range of products to the Polish market, which are based on dried flowers, as this is the product that thus far has been regulated in Poland. The products consists of different levels of THC, CBD and strains, where doctors decide which formulation is ideal for every individual patient, based on the symptoms. The key difference between CBD and THC oil is that THC has psychoactive effects while CBD does not. Medical cannabis can be used for several different conditions where chronic pain, multiple sclerosis, cancer and epilepsy are among the most common. THC has properties that can reduce nausea, which can arise in cancer treatment, while CBD has a dampening effect on cramps, and a combination can provide efficacy to patients suffering from pain.

Even though ODI Pharma's products primarily are based on flowers today, the Company's flexible business model with a supply agreement with one of the largest manufacturers in the world, enables ODI Pharma to introduce new products to the market in the future. Hence, ODI Pharma can let market demand decide which products the Company will supply, which as of now is the dried flowers. The most common symptom among patients to use medical cannabis in general, thus also ODI Pharma's products, is chronic pain. However, there are several other diseases where medical cannabis can be useful as a treatment to relieve symptoms, for instance nausea during cancer treatment, multiple sclerosis and epilepsy.

Cost Drivers

ODI Pharma's business model allows the Company to operate with a low cost base where the operational expenses can be held low while scaling up. The costs of goods sold (COGS) is expected to be the largest cost in the P&L as sales starts to ramp up. The COGS consists of the cost that ODI Pharma pays to the Company's cultivator Tilray for the raw material medical cannabis products. The products are ordered from Tilray as Synoptis places orders with ODI Pharma, meaning the Company does not need to maintain any inventory. Thanks to ODI Pharma's business model, which involves acting as an intermediary between the manufacturer Tilray, responsible for cultivating and producing the products, and the distributor Synoptis, who market and distribute the products, the Company can keep operational costs low and largely fixed. The external expenses includes accounting, office and listing costs, which are all fixed costs. The only notable variable cost is the shipping cost for the products, which ODI Pharma outsources to an external part. Regarding personnel expenses, these include salaries to the management and director fees to the board but are low due to ODI Pharma's ability to run a slim organization. As a result of the business model, the Company can also run an asset light business, without larger investments in fixed assets or inventory.

New products can be introduced through flexible business model

ODI Pharma operates with a low cost base

Potential growth drivers

1

Short-term: Supply Synoptis with the products needed on the growing Polish market

2

Short- to midterm: Grow with Synoptis on new markets in Eastern Europe

3

Short- to midterm: Enter new markets, for instance in Western Europe.

Strategic Outlook

The most important short-term strategic milestone for ODI Pharma is to supply Synoptis with the products needed on the growing Polish market. Historically, there has been difficulties in supplying the growing market demand in Poland, partly because of products not reaching the quality requirements under the Polish regulation, partly because of the government having limits of the amount that was allowed to get imported to the country. Hence, ODI Pharma needs to ensure that the Company can supply Synoptis with high-quality products in sufficient quantity to achieve customer satisfaction. Given that ODI Pharma sources the products from one of the world's largest suppliers of cannabis, Canadian Tilray, the Company is considered capable of fulfilling these needs.

In the short- to midterm, ODI Pharma's growth strategy includes growing through the agreement with Synoptis on new markets. As earlier mentioned, the exclusive collaboration agreement includes supply of medical cannabis in 23 different countries. Analyst Group expects the Polish market to be the initial focus, but it should also be noted that Synoptis, as part of the NEUCA group, is a market-leading pharmaceutical company primarily in Poland, but also throughout Eastern Europe, which is why an expansion regarding medical cannabis in other countries is considered imminent. Moreover, ODI Pharma is also expected to expand to new markets outside of the markets included in the Synoptis-agreement, for instance in Western European markets. This strategy was validated in June 2024 when ODI Pharma made a strategic first delivery to the Swiss market, thereby increasing the Company's geographic presence and marking the first delivery to a Western European country as well as outside the collaboration agreement with Synoptis. This is expected to occur through a similar setup as with Synoptis, where ODI Pharma finds a partner within the pharmaceutical industry and becomes a supplier to that company, or through direct sales to pharmacies.

An Insight Into the Cannabis Market

The European medical cannabis market is in its early days and the regulatory framework is transforming throughout the continent. Hence, there are significant variations in the legislative frameworks of different European countries and the different rules and regulations according to the European Pharmacopeia, in regards to pesticides, quality and uniformity, which makes it difficult for medical cannabis companies to navigate the European market. In most markets, patients get access to medical cannabis through a prescription from a doctor, after which the products can be received at a pharmacy. Therefore, to expand the market, it is essential, among other things, to enhance doctors' knowledge regarding when medical cannabis is suitable for use, making the education of doctors about medical cannabis crucial.

150 million
pain patients in
Europe

The most common symptom where medical cannabis is used for treatment is chronic pain. At present, approximately 150 million people are experiencing chronic pain in Europe. Other diseases where medical cannabis can be useful as a treatment to relieve symptoms is cancer, multiple sclerosis and epilepsy. According to WHO, the estimated number of new cancer treatments in Europe every year is approximately 3.7 million and it has been estimated that over 6 million people suffer from epilepsy¹. Hence, one could argue that it is likely that a rise in demand for medical cannabis products is expected throughout a large number of countries. Since Canada introduced the medical cannabis program in 2016, several forms of legalizations have occurred in the European market. Several large and influential countries, such as Germany and the UK, have legalized and introduced the medical cannabis market, and more countries are expected to follow. Furthermore, Germany has legalized adult use in 2024 under a pilot program, which is expected to be a driver for more countries to ease regulations and a step towards greater acceptance of medical cannabis as well.

~50 Countries Worldwide are in Favour of Cannabis for Medical use.

Countries where cannabis for medical use is approved

- Approved medical use
- Approved medical use in 40 of 50 states
- Nonapproved for medical use

The Illegal Market is a Competitor to the Medical Cannabis Companies

Today, many potential patients are self medicating cannabis illegally, for instance, 1.8 million people in the UK are thought to buy cannabis illegally on the “street”, as it does not require a prescription from a doctor, while approximately 25,000-30,000 patients are being treated with legal medical cannabis. Hence, the European market is expected to grow through legalization as patients turn to the legal market where the products have been regulated and thus meet high standards. However, this shift is expected to occur more quickly in markets with insurance coverage, as illegal cannabis is presumed to be cheaper. Therefore, some patients are expected to continue purchasing from the illegal market in countries where there is no insurance coverage.

¹Source: Epilepsy Alliance Europe

Market growth has been held back by lack of supply

The Growth of Medical Cannabis in Poland is Accelerating

Medical cannabis was approved under Polish law in 2017. Since the legalization, market demand has grown steadily and Poland has become one of the countries with the greatest number of patients being treated with medical cannabis according to Prohibition Partners, while the country has had challenges in meeting demand with the same amount of supply. As a result of the regulation regarding product approval in the Polish market, few products have managed to obtain approval for sales. Hence, the market growth in Poland has historically been held back by the lack of supply. For instance, throughout much of 2021, pharmacies nationwide had no supply of medical cannabis at all, and when a delivery of 140 kg arrived in November 2021, the entire shipment was sold out within just two weeks. Moreover, there are currently no insurance coverage for medical cannabis in the Polish market, which is also expected to be something that have held the market growth back. However, there are ongoing discussions on insurance coverage regarding medical cannabis, which could accelerate the market growth further if implemented.

The Polish medical cannabis market has shown strong growth since 2017, albeit from low levels. Nevertheless, 2023 was a breakout year, when approximately 4,600 kg of medical cannabis was sold in the country, compared to approximately 1,200 kg in 2022 and 400 kg in 2021¹. For 2024, the demand for medical cannabis was estimated at approximately 6,000 kg at the beginning of the year, which also set the import quota for the year. However, due to high demand, the quota was reached with several months remaining in the year, prompting a near doubling of the quota in October to approximately 11,300 kg, which is expected to be the import quota for 2025. This figure reflects the Polish government's estimation of annual demand for medical cannabis. Consequently, the market remains in a phase of strong growth with increasing demand, which ODI Pharma is expected to capitalize on.

The Polish medical cannabis market has grown rapidly in the last couple of years.

Sales of medical cannabis in Poland and import quota for upcoming years 2019-2025E kg

Source: money.pl and Business of Cannabis

88% market growth in 2025E

ODI Pharma's Competitive Advantage is Expected to be Synoptis Strong Brand

As Analyst Group expects Synoptis to sell the products under their own brand in the future, this is expected to be one of the key competitive advantages for ODI Pharma. Synoptis, part of the NEUCA group, the market leading pharmaceutical distributor in Poland, has a strong presence in all of Eastern Europe. Thus, the Synoptis brand is well-regarded among Polish patients and doctors, who are expected to choose a well-established brand over more unfamiliar brands from other countries and continents. Moreover, as the Polish regulation have resulted in few products obtaining approval for sales, this implies high barriers to entry for competitors who would like to capitalize on the current rapid market growth, making ODI Pharma one of few players currently selling on the Polish market and benefiting from the high demand.

Strong Growth is Estimated in the European Market

Legal cannabis sales in Europe are expected to grow with a CAGR of 43% from 2023-2027, amounting to EUR 2.2bn at the end of the forecast period, according to market analyst Prohibition Partners. The anticipated expansion of the market is estimated to be fueled by ongoing advancements in the legalization of medical and adult cannabis usage. Presently, Germany stands as Europe's foremost market for medical cannabis, commanding more than half of the European market share.

¹Source: money.pl

²Estimated import quota for the year

Revenue Forecast

Has delivered the first significant sales of **SEK 21.4m** in H2-23/24

Through the agreement with Synoptis Pharma, ODI Pharma's products will be distributed, marketed and sold by Synoptis. The collaboration is now up and running and ODI Pharma has executed several product shipments in the last quarters, leading to revenues of SEK 21.4m in H2-23/24, i.e., June – January 2024, the first significant revenue in the Company's history. Out of the 23 countries, we see the greatest potential in the Polish market given Synoptis strong presence there. We also expect that the Polish market has so far accounted for, and is expected to continue accounting for, the largest share of sales in the short term. However, the Company is actively working to explore new markets for expansion, both within the framework of the collaboration with Synoptis in 23 Eastern European countries and by independently entering new markets in Western Europe. For instance, ODI Pharma delivered a strategic order to the Swiss market in June 2024, which, according to Analyst Group, validates the strategy of geographic expansion.

Brand awareness is expected to drive the growth of the products

The sales on the Polish market for ODI Pharma will be dependent of the sales of Synoptis medical cannabis products and as leading pharmaceutical brand in Poland, we expect Synoptis to establish medical cannabis products under their own well-known brand. By labeling the products with a well-known brand, doctors and patients in Poland are expected to prioritize the products ahead of other international brands, especially as the pricing for the products are expected to be similar. Hence, Synoptis strong brand is expected to fuel the revenue growth for ODI Pharma if or when the distributor label the products with their own brand.

Rapid market growth on the Polish market

The Polish market is currently growing at a rapid pace as 4,600 kg of medical cannabis was sold in the country during 2023, compared to approximately 1,200 kg in 2022 and 400 kg in 2021. The market is reliant on imports to supply the expanding medical cannabis market, as cultivation is not allowed in the country. The import has historically been limited by a quota set by the Polish government which determines how much can be imported each year. Going into 2024, the estimate of annual demand for cannabis for Poland, hence also the import quota, amounted to 6 tons. However, due to rapid growth in demand throughout the year, the quota was reached with several months left of the year, leading to the Polish government increasing the estimated annual demand for cannabis, hence also the quota, by 5.3 tons or 88% in October 2024, which is estimated to be applied from January 2025. This means that the updated quota amounts to approx. 11.3 tons in 2025, however, the import restrictions affected ODI Pharma's sales in the latest quarter, Q1-24/25, to amount to SEK 0.1m and is expected affect the upcoming second quarter as well. Going forward, we expect the updated quota, rapid market growth, and Synoptis strong brand presence in Poland to drive significant sales growth for ODI Pharma from 2025.

SEK 145m in estimated revenues 2026/2027E

ODI Pharma's revenue is based on the price per gram and number of grams sold. The market price for medical cannabis based on dried flowers in Poland is approximately EUR 13-16 for patients when purchased at pharmacies. Analyst Group estimates that ODI Pharma's price when selling products to Synoptis amounts to approximately 1/3 of this, why we have used a revenue per gram of EUR 5 for ODI Pharma in our model. ODI Pharma has realized the first significant revenues in the Company's history amounting to SEK 21.4m in H2-23/24, and we expect Synoptis, as a market leading brand, to continue to aggressively try to gain market share. Nevertheless, the current import restrictions is expected to affect H1-24/25, followed by a strong H2-24/25 based on the strong market growth and that Synoptis is expected to gain market share, primarily in Poland, why we estimate revenues of SEK ~31.9m, corresponding to a growth of 42%. In the remaining forecast period, we expect continued high growth to reach revenues of SEK ~145m in 2026/2027E as ODI Pharma continues to explore new market opportunities.

Revenue is expected to grow at rapid pace during the forecast period.

Source: Analyst Group estimates

Cost of Goods Sold Forecast

ODI Pharma's COGS consist of the amount the Company pays for the products to the manufacturer Tilray. Given ODI Pharma's business model, in which the Company acts as an intermediary between the manufacturer Tilray and the distributor Synoptis, and wherein ODI Pharma never physically handles the products themselves, Analyst Group believes that the Company should have a lower gross margin compared to other cannabis companies that cultivate and sell their own products. We therefore estimate a gross margin around 20% is reasonable in a business model like ODI Pharma's. What is the key to ODI Pharma's business model is that the operational expenses can be kept low, which is where the potential for profitability lies.

Analyst Group estimate the gross margin to amount to around 20% during the forecast period.

Source: Analyst Group estimates

Operational Expenses Forecast

The business model allows for limited operational expenses

As earlier mentioned, ODI Pharma's business model allows for limited operational expenses. Regarding the external expenses, these include auditing costs, office costs and shipping costs for the products. Most of these costs are fixed and Analyst Group assesses that ODI Pharma can grow revenues without having to increase these costs at a similar pace, paving the way for increased profitability in the forecast period. We estimate the external expenses to grow from SEK 4.3m in 2023/2024 to SEK 8.4m in 2026/2027E, where the increase in absolute terms is primarily attributable to shipping costs. Regarding personnel expenses, we expect ODI Pharma to keep the personnel expenses low while scaling up. Given the business model, acting as an intermediary between the producer Tilray and the distributor Synoptis and outsourcing the shipping, we see no need to scale up the personnel significantly, why we estimate a relatively stable development in the personnel expenses in the forecast period. As ODI Pharma outsources all production and shipping to external partners, we do not see any needs for larger investments in the coming years, keeping the Company asset light and keeping depreciation at low levels. This is expected to drive profitability with the EBIT margin expanding from 1% in 2024/2025 to 14% in 2026/2027

¹Adjusted for other operating income

ODI Pharma's scalable and asset light business model enables growing profitability throughout the forecast period.

Financial forecasts, 2023/2024-2026/2027E, Base scenario

An Insight into the Cannabis Industry

In the valuation of ODI Pharma, we have chosen to compare a broad group of companies within the cannabis sector. We make a comparison with companies in the less mature European market as well as a comparison with companies in the somewhat more mature North American market. Although the comparison companies differ from ODI Pharma in terms of business model, target market, profitability potential, and if they address medical or recreational cannabis, Analyst Group believes that the comparison provides an indication of how the market currently values companies in the cannabis sector.

European Industry Companies	Market cap (SEKm)	Revenue (LTM, SEKm)	Revenue growth Y-Y	Gross Margin	EBIT (LTM, SEKm)	P/S (x)	P/E (x)
 Kanabo Group	96	15.7	40%	8%	-112	6.1	neg.
 Dancann Pharma	28	12.4	21%	55%	-12	2.2	neg.
 Cantourage	638	268.4	67%	n.a.	n.a.	2.4	neg.
 Synbiotic	417	2.0	163%	n.a.	-70	210.3	neg.
 Celadon Pharmaceuticals	115	1.8	528%	n.a.	-69	53.5	neg.
 Cannabis Poland	63	0.1	270%	n.a.	-4	426.8	neg.
 Hemp & Health	63	0.2	-41%	n.a.	-2	358.6	neg.
 Stenocare	70	3.4	-60%	n.a.	-24	20.3	neg.
Average	186	38.0	124%	32%	-42	135.0	
Median	83	2.7	54%	32%	-24	36.9	

Regarding the European compared companies, several are in an early phase with low or no sales to date and are unprofitable. Some of the companies are showing rapid sales growth while other companies are showing more modest growth or decrease in sales. Analyst Group anticipates that the low sales and unprofitability among European cannabis companies is a result of a highly regulated and slower-than-expected market growth. To get products approved for sales and doctors to prescribe it has proven to be more challenging than expected, leading to large investments in for instance cultivation are yet to be paid of.

North American Companies	Market cap (SEKm)	Revenue (LTM, SEKm)	Revenue growth Y-Y	Gross Margin	EBIT (LTM, SEKm)	P/S (x)	P/E (x)
 Aurora Cannabis	2,617	2,306	8%	43%	-288	1.1	neg.
 Canopy Growth	4,057	2,187	-30%	n.a.	-1,863	1.9	neg.
 Cresco Labs	3,924	8,120	-6%	51%	1,267	0.5	neg.
 Jushi Holdings	698	3,157	3%	42%	68	0.2	neg.
 Organigram	1,841	1,167	-11%	18%	-2,016	1.6	neg.
 Curaleaf	13,967	14,940	0%	47%	479	0.9	neg.
 Green Thumb Industries	21,176	12,356	8%	52%	1,961	1.7	30.2
Average	6,897	6,319	-4%	42%	-56	1.1	30.2
Median	3,924	3,157	0%	45%	68	1.1	30.2

The North American companies are larger, more mature companies that is already generating substantial sales because of a more mature market. As a result of the more mature market, however, growth is lower, and the companies are only growing by a few percent on average. Regarding profitability, most companies are unprofitable despite the higher maturity and sales compared to the European companies. Analyst Group anticipates this is due to a competitive market that has led to a declining market price, while significant investments have been, and are still being, made in production. As a comparison to the peer groups, below is a similar table regarding ODI Pharma based on the fiscal year 2023/2024.

Comparison	Market cap (SEKm)	Revenue, 23/24, SEKm	Revenue growth 23/24	Gross Margin 23/24	EBIT, 23/24, SEKm	P/S (x)	EV/EBIT (x)
 ODI Pharma	48	22	15,996%	21%	1.2	2.1	34.4

One of few
profitable
companies

As illustrated in the tables above, ODI Pharma is one of few companies within the selected peer group that are profitable regarding operating results and one of two who are expected to showcase a positive P/E ratio. Even though import restrictions is affecting the Company's profitability in the short term, ODI Pharma is expected to improve the profit owing to the collaboration with Synoptis Pharma, which creates a **unique investment opportunity in a profitable medical cannabis company**, according to Analyst Group.

Unique investment opportunity

Valuation: Base scenario

As earlier mentioned, few companies are profitable in the cannabis sector. Analyst Group anticipates that this is a result of many companies needing to make large investments in regulatory work to operate on the highly regulated market as well as large investments in cultivation facilities. Hence, we see ODI Pharma's business model as unique in the industry, acting as an intermediary between the producer Tilray, who makes the necessary investments for cultivation, and the distributor Synoptis, who makes the required investments for sales. Through this business model, ODI Pharma can keep a slim, asset light organization and is expected to be profitable in the upcoming year when sales from the agreement with Synoptis is estimated. Therefore, Analyst Group sees an investment in ODI Pharma as a unique investment opportunity, as a **profitable company in the medical cannabis industry**.

As most of the comparison companies in both Europe and North America are currently unprofitable, the valuation will be derived from a sales multiple applied on ODI Pharma's estimated sales in 2025/2026. Compared to the peers in both markets, ODI Pharma is a smaller company, which motivates a valuation discount. Additionally, ODI Pharma's business model, as previously mentioned, entails high scalability, but also a lower gross margin compared to the peers, where the more mature north American peers has a gross margin (median) of 45%, which means a lower profitability potential at higher sales volumes for ODI Pharma compared to companies in the industry, which also entails a valuation discount. However, ODI Pharma is expected to be one of few profitable companies in the industry and with a scalable and asset-light business model generate strong cash flows, which entail a valuation premium.

Taking the reasoning above into consideration, Analyst Group believes a target multiple of P/S 2.5x on estimated sales during 2025/2026 is reasonable. A target multiple of P/S 2.5x on 2025/2026's estimated revenues of SEK 95.7m corresponds to a Market Cap of SEK 239m. To make up for uncertainties in the forecasts, a discount rate of 13.1% is applied. Based on a market cap of SEK 239m in 2026, a discount rate of 13.1%, and the estimated outstanding shares after the rights issue in December 2024, a present value per share of SEK 12.3 is derived in a Base scenario.

SEK 12.3
per share in a Base scenario

Valuation: Discounted Cash Flow

As a complement to the multiple valuation, a DCF has been conducted. In our DCF model, we have assumed a decreasing growth rate after the explicit forecast period, from 25% growth in 2027/2028 to 2% in the residual period, and a long-term EBIT margin of ~15%. The DCF model indicates a potential present value per share of SEK 11.9, which is thus relatively closely aligned with the multiple valuation. However, given ODI Pharma's short sales history, there are uncertainties in the forecasts made, which makes a DCF valuation less suitable. Therefore, we have chosen to base our valuation of ODI Pharma on the derived multiple valuation, but we still see the DCF-valuation as a relevant support for the valuation. Below is a summary of our DCF-valuation.

ODI Pharma is estimated to generate a stable and growing cash flow as a result of strong market growth and a scalable business model

DCF valuation, summary

Implied Share Price	
WACC	13.1%
Present Value Free Cash Flows	92,336,967
Terminal Value	91,752,901
Enterprise Value	184,089,868

Implied Market Cap	190,034,134
Shares Outstanding	15,981,000
Implied Value Per Share	11.9

Source: Analyst Groups valuation

Bull scenario

In a Bull scenario, Synoptis products are expected to receive a greater reception in the Polish medical cannabis market, primarily driven by the fact that the products are expected to be sold under the well-known Synoptis brand in the future. This is expected to lead to doctors prescribing these products more frequently compared to competing foreign brands. Moreover, the favorable reception of the products in the Polish market is expected to lead to Synoptis consider expanding to several of the 23 countries included in the collaboration agreement with ODI Pharma. Although Synoptis brand is most well-known in Poland, the distributor also has a significant presence in other Eastern European countries, which is expected to drive strong sales in these markets as well, resulting in increased revenues for ODI Pharma. Finally, ODI Pharma's products are expected to be well received in the Swiss market and contribute significantly to the Company's sales during the forecast period, after which the Company are able to expand into other markets in Western Europe. In a Bull scenario, ODI Pharma is expected to grow revenues from SEK 22m in 2023/2024 to SEK 168m in 2026/2027, corresponding to a CAGR of 96%.

Considering ODI Pharma's business model, the Company is expected to be able to keep the cost base low in a Bull scenario as well. Thus, we estimate limited operating expenses with a slightly higher gross margin than in a Base scenario. The increase of operational expenses in absolute numbers are a result of shipping costs increasing with higher sales volumes. Nevertheless, the EBIT margin, adjusted for other operating income, is expected to improve from -8% in 2023/2024 to 16% in 2026/2027.

In a Bull scenario, a target multiple of P/S 2.6x is applied on 2025/2026's estimated revenues of SEK 116m, which corresponds to a Market Cap of SEK 302m. Based on a market cap of SEK 302m in 2026, a discount rate of 13.1%, and the estimated outstanding shares after the rights issue in December 2024, a present value per share of SEK 15.5 is derived in a Bull scenario.

SEK 15.5
per share in a
Bull scenario

Bear scenario

In a Bear scenario, a slower sales growth is estimated than in a Base scenario as the products receive a cooler reception in the Polish market. Demand is expected to be lower than in a Base scenario due to an anticipated stigma among doctors regarding medical cannabis, which leads to fewer doctors prescribing medical cannabis in ODI Pharma's markets. This development also results in Synoptis holding back on expansion to more Eastern European markets, which in turn restrains ODI Pharma's growth. In a Bear scenario, ODI Pharma is expected to grow revenues from SEK 22.4m in 2023/2024 to SEK 55m in 2026/2027, corresponding to a CAGR of 35%.

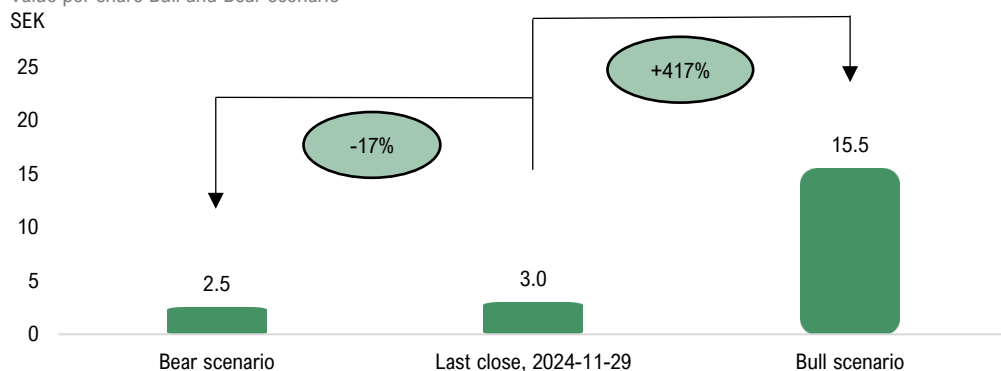

A lower gross margin is estimated in a Bear scenario and even though ODI Pharma is still expected to keep a slim organization, the lower revenues and gross margin is estimated to result in a lower profit margin than in a Base scenario, albeit positive. The EBIT margin, adjusted for other operating income, is expected to improve from -8% in 2023/2024 to 5% in 2026/2027.

In a Bear scenario, a target multiple of P/S 1.2x is applied on 2025/2026's estimated sales of SEK 40.6m, which equals to a Market Cap of SEK 49m. Based on a market cap of SEK 49m in 2026, a discount rate of 13.1%, and the estimated outstanding shares after the rights issue in December 2024, a present value per share of SEK 2.5 is derived in a Bear scenario.

Management & Board

Derek Simmross, CEO

Derek Simmross, co-founder of ODI Pharma, exposes a 25-year background within finance before forming ODI Pharma. His experiences within finance include trading, derivative portfolio management, investment management, hedge fund management, M&A, capital raising and private equity. He has also done treasury advisory in sectors such as mining, telecom, FX and banking and Central banks.

Derek owns 3,950,000 shares (26%) in ODI Pharma.

Volker Wiederrich, Chairman of the Board

Volker Wiederrich, co-founder of ODI Pharma, has an extensive background in investment and asset management across multiple asset classes before forming ODI Pharma. He has eleven years of experience advising one of the biggest financial institutions of Europe on fund investments in real estate, as well as ten years as Chief Investment Officer for an advisory firm for infrastructure and real estate within a global capacity. Volker advised on more than 500 million USD in investments and was managing multiple fund of funds products during his career.

Volker owns 6,055,898 shares (39.8%) in ODI Pharma.

Karina Kilinski, Sales Director and Member of the Board

Karina Kilinski has 13 years of experience trading commodities and goods between Poland and Germany/Switzerland, as well as eleven years of running local Polish production and distribution companies. Karina also has 12 years of funding and running online trading and retail sales businesses.

Karina owns no shares in ODI Pharma.

Gösta Lidén, Member of the Board

Gösta Lidén has a long background of company management, directorships and steering committees. He has more than 20 years of experience of management in sectors such as banking, IT, retail, energy, real estate and aviation. Gösta has worked with management at heavily regulated global companies such as banks and financial services companies. He works as director on the Boards of more than 30 client entities, including independent director.

Gösta owns no shares in ODI Pharma.

Malcolm Allan, Member of the Board

Malcolm Allan has extensive experience in senior positions within global companies and political campaigns. For the past three years, he has been serving as Vice President at Tilray Brands Inc. Prior to that, he was the Global COO for Havas Media and Managing Director for Prudential in London, UK. He holds a Bachelor of Arts with honors in Political Science and Economics from McGill University.

Malcolm owns no shares in ODI Pharma.
